

Dementia Wellbeing Plan on the GM Care Record

Health Innovation Manchester are rolling out a digital care plan to support care and management in Dementia patients supported by a Person Held Record (PHR) app.

Personalised care and support planning is essential for helping people living with Dementia. It transforms their experience from a largely reactive service, which responds when something goes wrong, to a more proactive service, centered on the needs of the individual. Improved quality of care for people with Dementia can be achieved with a care plan in place.

The Greater Manchester dementia wellbeing plan was developed by Dementia United who collaborated with experts by experience to ensure that the content of the dementia wellbeing plan focused on the priorities for people living with dementia and family carers. It promotes personalised planning conversations with people living with dementia and carers about their needs and wants. The plan ensures an improved standard of care planning for people living with dementia and also facilitates sharing across the system. You can find out more here <https://dementia-united.org.uk/dementia-wellbeing-plan/>

Why Digitally Transform Care Planning in Dementia?

Working closely with our partners; NHS Greater Manchester Integrated Care (Dementia United) and the Alzheimer's Society, this project will transform care planning in Dementia.

Standardised Care Planning

Care planning will move from a variable, paper-based process to a standardised digital Dementia Wellbeing Plan.

Continuity of Care Planning and Communication

The plan can be utilised across care settings via the GM Care Record and enhancing the continuity of care and communications across primary care, secondary care and community care.

Improved Support

Through access to their own wellbeing plan on a patient facing app, patients will be supported more effectively within the community, while also empowering patients and their carers to take greater control and be more informed about their condition.

Patient Satisfaction and Experience

Improved sharing of patient information through the wellbeing plan will increase patient and carer satisfaction and experience.

Further Information

Resources to support the rollout of the Dementia Wellbeing Care Plan (including patient leaflets, demonstrations and presentations) can be found at: <https://healthinnovationmanchester.com/careplans>
